

WAS EVER A BIGGER MOUNTAIN MADE OUT OF SMALLER MOLEHILL?

“ONCE-IN-100 YEAR PANDEMIC”! REALLY?!

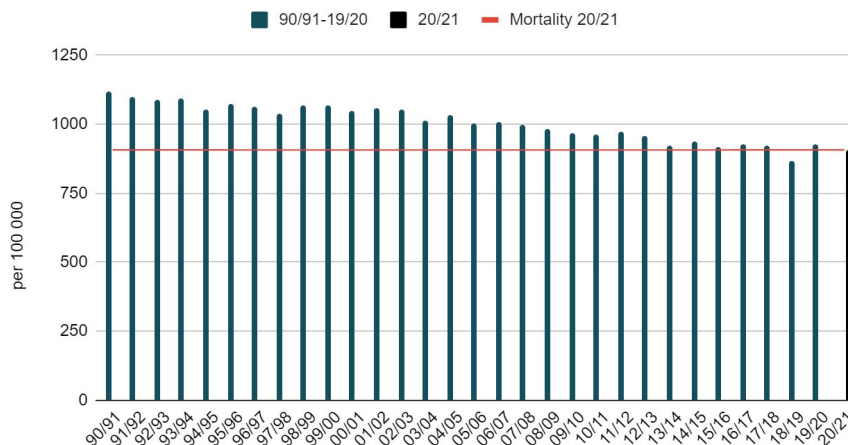

UK government reported in August 2021 in the UK Parliament that infection fatality rate (IFR) for covid is 0.096%¹

Note that the IFR for the **seasonal flu** is 0.1%². The only reason covid takes more lives than flu is because it infects more people (which also means there is no way to stop it).

SWEDEN WITHOUT LOCKDOWNS: IDENTIFY THIS MEGA-PANDEMIC IF YOU CAN!

Nobel prize winner Michael Levitt calculated that in Sweden – the only nation that followed its pandemic plan and **rejected lockdowns** – 2,996 excess deaths occurred in 2020³, using the baseline deaths of 2017-2019. This is around 3% of its expected annual deaths. It is **IMPOSSIBLE to identify any pandemic in the death rate of Sweden for 2020 and 2021 – chart below.**

Comparing all cause mortality October through September per 100 000
Sweden Data Source SCB (Updated 13 October)

Victoria’s pandemic plan of 10 March 2020 said that “COVID-19 is assessed as being of **moderate clinical severity**”. That’s **precisely** what covid has **always** been.

COVID HAS BEEN GROSSLY EXAGGERATED BY AN ORDER OF 50-100 TIMES BY AUSTRALIAN GOVERNMENTS.
